DETAILED ACTION

Election/Restrictions

Claims 1-13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 01/12/05.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 14-21 are rejected under 35 U.S.C. 102(a) as being anticipated by Aronson et al. (US2002/0149821).

With respect to claim 14, Aronson show in Fig.2-3 an optoelectronic device 100 comprising: an optical subassembly 103; a driver circuit 105 coupled to the optical subassembly; a memory 120, including one or more memory arrays for storing information used to control operation of the driver circuit, wherein the

memory has stored therein a distinct set of digital temperature compensation values 122 determined through testing of the optoelectronic device, an interface 121 for reading from and writing to locations within the memory in accordance with commands from a host device, a temperature sensor 125; and a control logic 134 configured to determine a control value for the driver circuit in accordance with one or more digital temperature compensation values stored in the memory and the digital temperature value.

With respect to claim 19, Aronson show in Fig.2-3 an optoelectronic device 100 comprising: an optical subassembly 103; a controller integrated circuitry 102 in communication with the optical subassembly, the controller integrated circuitry comprising: a memory device 120 configured to store control parameters for at least one operating requirement corresponding to a range of operating temperatures 122, and a control logic 134 configured to access the control parameters in the memory device to control the at least one operating requirement when the optoelectronic device is operating at a temperature within the range of operating temperatures.

With respect to claims 15-16 and 20-21, Aronson show in Fig.2 the TOSA 103 and the ROSA 102.

With respect to claim 17, Aronson show in Fig.3 an analog to digital conversion circuitry 127 for receiving an analog signal from the temperature sensor 125, converting the received analog signal into a digital temperature value.

With respect to claim 18, Aronson show in Fig.2-3 the digital to analog circuitry 123 configured to convert the control value to a control signal to control the driver circuit 105.
